CATEGORY-WISE AI TOOLS

A practical guide for no-code users, students, teachers, researchers, professionals, and creators

82 tools organized by category, with official website links, realistic examples, and step-by-step workflows.

How to use this guide

- Choose a category based on your task or profession.
- Open the official website and sign in if required. Some features may require a paid plan or may vary by country.
- Follow the workflow in the final column, starting with a small, low-risk example.
- Review AI outputs for accuracy, bias, copyright, privacy, and suitability before using them professionally.

Important: This directory is a practical selection, not a claim that every product is fully free or available in every region. For healthcare, legal, HR, finance, and other high-impact work, use approved systems and retain qualified human review.

AI assistants & research

Tool name	Website link	Example	How to work / workflow
ChatGPT	chatgpt.com/	Draft a lesson plan, analyze a spreadsheet, or brainstorm a project.	Enter a goal → provide context/files → refine with follow-up prompts → verify facts and export/copy the result.
Google Gemini	gemini.google.com/	Explain a topic, summarize material, or brainstorm a project.	Describe the task → attach supported files if needed → request a structured answer → check important claims.
Claude	claude.ai/	Review a long report or improve a draft.	Upload/paste content → state the role and desired output → ask for a summary or revision → review the output.
Perplexity	www.perplexity.ai/	Research a topic and collect source links.	Ask a focused question → inspect cited sources → open primary sources → compile a referenced summary.

Education & students

Tool name	Website link	Example	How to work / workflow
Khanmigo	www.khanacademy.org/khan-labs	Practice algebra with guided questions.	Choose a topic → ask for hints rather than just answers → solve each step → check understanding.
Quizlet	quizlet.com/	Create flashcards for biology terms.	Enter or import notes → generate/organize flashcards → practise with quizzes → review missed terms.
Gemini Notebook (formerly NotebookLM)	notebook.google/	Ask questions about uploaded lecture notes or papers.	Create a notebook → add PDFs/Docs/URLs or supported sources → ask source-grounded questions → inspect citations and summaries.
Photomath	photomath.com/	Understand a quadratic equation.	Scan/type the problem → review the worked steps → attempt a similar question independently.

Mathematics

Tool name	Website link	Example	How to work / workflow
Wolfram Alpha	www.wolframalpha.com/	Solve an equation or plot a function.	Type the mathematical expression/question → inspect computation and graph → check assumptions and units.
Symbolab	www.symbolab.com/	Find steps for an integral or derivative.	Enter the expression → choose the relevant operation → study the steps → verify by substitution or another method.
GeoGebra	www.geogebra.org/	Explore how changing a coefficient affects a parabola.	Open Graphing Calculator → enter an equation → add sliders → vary parameters and observe the graph.

Language & communication

Tool name	Website link	Example	How to work / workflow
Grammarly	www.grammarly.com/	Improve clarity and grammar in an essay.	Paste/upload draft → review suggested edits → accept only suitable changes → preserve your own voice.
DeepL	www.deepl.com/	Translate a paragraph for language practice.	Paste text → choose target language → compare alternatives → have a fluent speaker check high-stakes text.
ELSA Speak	elsaspeak.com/	Practise pronunciation of English phrases.	Select a lesson → speak into the app → review feedback → repeat difficult sounds.

Researchers

Tool name	Website link	Example	How to work / workflow
Elicit	elicit.com/	Find papers on AI in healthcare.	Enter a research question → screen suggested papers → extract findings into a table → verify against full papers.
Consensus	consensus.app/	Explore evidence on a scientific question.	Ask a focused question → review cited studies and evidence summaries → open papers → distinguish correlation from causation.
ResearchRabbit	www.researchrabbit.ai/	Find related papers and authors.	Start with a known paper → explore connected papers/authors → save a collection → export/manage reading list.
Scite	scite.ai/	Check how a paper is cited by later work.	Search a paper or claim → inspect citation contexts → determine whether citations support, contrast, or merely mention it.
Semantic Scholar	www.semanticscholar.org/	Find papers on multi-agent systems.	Search keywords → filter by date/field → inspect abstracts and references → build a reading shortlist.

Artists & designers

Tool name	Website link	Example	How to work / workflow
Midjourney	www.midjourney.com/	Create concept art for a science-fiction poster.	Describe subject, composition, style, lighting, and aspect ratio → generate variations → refine prompt → check usage terms.
Adobe Firefly	firefly.adobe.com/	Generate a background or edit an image.	Choose a generation/editing feature → enter prompt or upload image → adjust variations → review licensing and output.
Leonardo AI	leonardo.ai/	Create game-character concept art.	Choose image workflow/model → describe character and style → generate options → refine and export.
Canva AI	www.canva.com/	Design a workshop poster.	Choose a design/template → use AI features for text or visuals → edit layout and branding → export.
Photoroom	www.photoroom.com/	Remove a product-photo background.	Upload photo → remove background → choose new backdrop → review edges and export.

Healthcare

Tool name	Website link	Example	How to work / workflow
OpenEvidence	www.openevidence.com/	Explore a clinical evidence question.	Ask a clinical question → review evidence and references → open primary sources → apply only with qualified clinical judgment.
AMBOSS	www.amboss.com/	Study a medical topic for an exam.	Search topic → read reference/learning content → answer practice questions → verify with current guidance.
Glass Health	glass.health/	Explore a clinical documentation or decision-support workflow.	Enter appropriate clinical context in an authorized environment → review generated suggestions → clinician verifies and decides.
Microsoft Dragon Copilot	www.microsoft.com/	Assist clinical documentation where available.	Use an authorized clinical setup → capture permitted encounter information → review/edit note → approve before adding to record.

Teachers & trainers

Tool name	Website link	Example	How to work / workflow
MagicSchool AI	www.magicschool.ai/	Draft a lesson plan with learning outcomes.	Choose a teacher tool → enter grade, topic, and objectives → generate draft → adapt to syllabus and learners.
Curipod	curipod.com/	Create an interactive lesson on climate change.	Enter topic/learning goals → generate lesson slides and activities → edit questions → present and review responses.
Diffit	www.diffit.me/	Adapt a reading passage for different reading levels.	Enter topic or source text → choose learner level/language → generate differentiated materials → verify accuracy and accessibility.
QuestionWell	questionwell.org/	Generate quiz questions from a lesson.	Provide topic or text → choose question types → review/edit questions → export to a supported teaching platform.
Gamma	gamma.app/	Create a 10-slide presentation.	Enter topic and audience → generate outline/slides → edit claims and visuals → present or export.

Developers & app builders

Tool name	Website link	Example	How to work / workflow
Cursor	cursor.com/	Debug a Python script.	Open project → describe bug and expected behavior → inspect proposed changes → run tests and review diffs.
GitHub Copilot	github.com/features/copilot	Generate unit-test suggestions.	Use in supported IDE → describe task or select code → inspect suggestions → run tests and security checks.
Replit	replit.com/	Build a simple quiz website.	Describe app requirements → generate starter project → run preview → test flows and publish if suitable.
Lovable	lovable.dev/	Create a student project-tracker web app.	Describe screens and features → generate app → refine via prompts → test authentication/data handling before release.
Bolt.new	bolt.new/	Prototype a course-registration interface.	Describe app and pages → generate project → preview and iterate → test responsiveness and integrations.

Data & analytics

Tool name	Website link	Example	How to work / workflow
Julius AI	julius.ai/	Explore sales CSV data and create charts.	Upload dataset → ask analysis questions → review charts/statistics → verify calculations and data definitions.
Power BI	www.microsoft.com/power-platform/products/power-bi	Build a sales KPI dashboard.	Import/transform data → model relationships → define measures → build visuals → validate totals and publish with permissions.
DataLab	datalab.com/	Analyze a dataset in a notebook environment.	Upload/connect data → use notebook and AI assistance → run analysis → review code, outputs, and reproducibility.
Obviously AI	www.obviously.ai/	Prototype a customer-churn prediction.	Upload structured data → select target variable → train/compare model → inspect metrics, leakage, and limitations.

Business automation & AI agents

Tool name	Website link	Example	How to work / workflow
Zapier / Zapier Agents	zapier.com/agents	Route a new form submission to an email summary.	Choose trigger → connect permitted apps → define AI task/actions → test with sample data → enable and monitor.
Make	www.make.com/	Automate form-to-spreadsheet processing.	Create visual scenario → add trigger and action modules → map fields → test each step → schedule/activate.
Gumloop	www.gumloop.com/	Summarize feedback and classify requests.	Create visual workflow → add data input and AI steps → define outputs → test examples → monitor quality.
Lindy	www.lindy.ai/	Draft meeting follow-ups from notes.	Choose assistant/workflow → connect authorized services → define trigger and instructions → review drafts before sending.
Voiceflow	www.voiceflow.com/	Build an FAQ chatbot for a college.	Design conversation flow → add knowledge sources → test common and edge-case questions → publish to a channel.
Botpress	botpress.com/	Create a customer-support chatbot.	Create bot → add knowledge/instructions → configure integrations → test fallback and escalation → deploy.
Dify	dify.ai/	Build a knowledge-base assistant.	Create app → add knowledge sources and retrieval settings → configure model/prompt → test citations → publish/API.
Flowise	flowiseai.com/	Visual prototype of a RAG chatbot.	Connect document loader, splitter, embeddings, vector store, retriever, and model nodes → test queries → deploy appropriately.

Business apps

Tool name	Website link	Example	How to work / workflow
Softr	www.softr.io/	Create an internal employee portal.	Choose app template → connect data source → configure pages/permissions → preview with test users → publish.
Glide	www.glideapps.com/	Create a simple attendance app.	Connect spreadsheet/data → choose layout → define actions and roles → test on mobile → publish.

Website building

Tool name	Website link	Example	How to work / workflow
Framer	www.framer.com/	Create a landing page for a course.	Describe page and style → generate/edit sections → check mobile layout and links → publish domain.

Video creation

Tool name	Website link	Example	How to work / workflow
Runway	runwayml.com/	Generate a short scene for a lesson.	Choose video tool → write scene/motion prompt or upload media → generate variants → edit and check rights.
HeyGen	www.heygen.com/	Create a narrated explainer with an avatar.	Choose avatar/template → enter script and language → generate preview → review pronunciation, consent, and claims.
Synthesia	www.synthesia.io/	Create a training video from a script.	Choose template/avatar → add script and scenes → generate → review accessibility and accuracy.

Audio & music

Tool name	Website link	Example	How to work / workflow
ElevenLabs	elevenlabs.io/	Generate narration for a training video.	Enter approved script → choose voice/language → generate audio → review pronunciation and consent/voice rights.
Suno	suno.com/	Create a short theme song for a project.	Describe genre, mood, and lyrics → generate versions → review content and commercial-use terms.

Video & podcast editing

Tool name	Website link	Example	How to work / workflow
Descript	www.descript.com/	Edit a recorded lecture by editing transcript text.	Import recording → transcribe → edit text/remove sections → review audio/video sync → export.

Marketing & sales

Tool name	Website link	Example	How to work / workflow
HubSpot	www.hubspot.com/	Draft a campaign email for a product.	Enter audience and objective → generate draft → personalize and verify → review consent/compliance → send through approved workflow.
Jasper	www.jasper.ai/	Create product-description variations.	Set brand voice and audience → provide product facts → generate options → fact-check and edit.
Copy.ai	www.copy.ai/	Draft a sales outreach sequence.	Define prospect and value proposition → generate sequence → personalize each message → verify claims and follow-up rules.
Predis.ai	predis.ai/	Create social post concepts.	Enter topic/brand → generate copy and creative → edit for brand/accuracy → schedule or export.
Surfer	surferseo.com/	Optimize an article for search intent.	Enter keyword/topic → review content guidance → edit article naturally → fact-check and publish.

Architecture & interiors

Tool name	Website link	Example	How to work / workflow
Autodesk Forma	www.autodesk.com/products/forma/	Explore early-stage site/building options.	Create/import site context → configure design options → compare environmental/site analyses → validate with professionals.
Interior AI	interiorai.com/	Visualize alternative room styles.	Upload room image → choose style → generate options → check dimensions and feasibility before purchasing.
Planner 5D	planner5d.com/	Plan a room layout.	Create/import floor plan → add furniture and dimensions → preview in 2D/3D → check measurements.

Legal

Tool name	Website link	Example	How to work / workflow
Harvey	www.harvey.ai/	Assist with a permitted contract-review workflow.	Use approved workspace → provide authorized documents → ask for clause/risk summary → lawyer verifies against law and source text.
LexisNexis	www.lexisnexis.com/	Research a legal issue.	Search legal database/AI feature available to account → inspect primary authorities → verify jurisdiction, currency, and citations.
CoCounsel	www.cocounsel.com/	Summarize a document for legal review.	Upload authorized material → request a summary or issue list → compare with source → professional verifies.

Finance & accounting

Tool name	Website link	Example	How to work / workflow
Microsoft Excel / Copilot	www.microsoft.com/microsoft-365/excel	Summarize monthly expenses and create formulas.	Prepare clean data → ask for formula/analysis help in available features → verify calculations and totals → protect sensitive data.
Datarails	www.datarails.com/	Consolidate budget-versus-actual reports.	Connect authorized finance data → map accounts → generate reports/variance analysis → reconcile with source ledgers.
Booke AI	booke.ai/	Assist bookkeeping categorization.	Connect authorized bookkeeping data → review suggested classifications → reconcile transactions → accountant approves.

HR & recruitment

Tool name	Website link	Example	How to work / workflow
Eightfold AI	eightfold.ai/	Explore skills-based talent matching.	Configure approved talent data → define role/skills → review matching insights → check bias, privacy, and human oversight.
HireVue	www.hirevue.com/	Organize digital interview workflows.	Configure role and structured interview → invite candidates → review permitted outputs → maintain fair, human-led decisions.
Textio	textio.com/	Improve clarity of a job description.	Paste draft → review language suggestions → remove irrelevant requirements → validate job criteria and accessibility.

Agriculture

Tool name	Website link	Example	How to work / workflow
Plantix	plantix.net/	Investigate a possible crop-leaf disease.	Capture a clear plant image → review possible issue and advice → compare with local agronomist guidance before treatment.
Agrio	agrio.app/	Monitor crop health or inspect plant symptoms.	Capture observations/images → review app guidance → track field conditions → consult agronomist for consequential decisions.
Cropwise	cropwise.com/	Organize crop-management information.	Set up farm/field data → review available crop insights → record actions → validate recommendations locally.

Accessibility

Tool name	Website link	Example	How to work / workflow
Be My Eyes	www.bemyeyes.com/	Get a description of an object or scene.	Open app → use available AI visual assistance or volunteer support → confirm critical details independently.
Seeing AI	www.seeingai.com/	Read printed text aloud.	Open supported feature → point camera at text/object → listen to output → verify names, amounts, and critical details.

Meetings & notes

Tool name	Website link	Example	How to work / workflow
Otter.ai	otter.ai/	Transcribe a permitted meeting and extract action items.	Record/import with consent → generate transcript → review names and decisions → assign/check action items.

End-to-End No-Code Workflow Examples

Use these simple recipes to combine tools into useful outcomes.

1. Student study workflow

Tool chain: Gemini Notebook / NotebookLM → ChatGPT or Gemini → Quizlet

Steps: Add lecture notes or a PDF to the notebook tool → ask for a source-based summary and 10 key concepts → ask ChatGPT/Gemini to create practice questions → transfer terms into flashcards → answer the quiz without looking at notes → check mistakes against the original source.

2. Mathematics learning workflow

Tool chain: Photomath or Symbolab → Wolfram Alpha → GeoGebra

Steps: Enter a problem and study the worked steps → independently verify the result with Wolfram Alpha → graph the function or equation in GeoGebra → change parameters and explain how the graph changes.

3. Research literature workflow

Tool chain: Semantic Scholar → Elicit / Consensus → ResearchRabbit → Scite

Steps: Search for a research question → shortlist relevant papers → extract study aims, methods, and findings into a comparison table → discover connected papers → inspect citation context → read the original papers and write a properly referenced synthesis.

4. Teacher lesson workflow

Tool chain: Gemini Notebook / NotebookLM → MagicSchool AI → Gamma → Quizlet or QuestionWell

Steps: Upload syllabus and trusted teaching materials → ask for a topic outline → generate lesson activities and differentiated explanations → create slides → draft a quiz → review every question and align the lesson to learning outcomes.

5. No-code FAQ chatbot

Tool chain: Dify or Botpress → approved FAQs / documents → test users

Steps: Collect approved FAQ documents → create a bot and add its knowledge sources → set instructions to answer from those sources and say when unsure → test common, ambiguous, and out-of-scope questions → review privacy/access controls → publish and monitor.

6. Business workflow automation

Tool chain: Form or email trigger → Zapier / Make / Gumloop → spreadsheet or CRM → human review

Steps: Choose a repetitive task → define the trigger and desired result → map fields into an AI step → create a draft classification or summary → test with dummy data → require approval before sending messages or changing records → monitor failures and logs.

7. Data analysis workflow

Tool chain: CSV / Excel → Julius AI or ChatGPT → Power BI

Steps: Clean column names and check missing values → upload a non-sensitive sample → ask for summary statistics and suitable charts → validate calculations independently → import clean data into Power BI → build KPI visuals → document definitions and refresh process.

8. Creative campaign workflow

Tool chain: ChatGPT → Canva AI / Firefly → Predis.ai → human review

Steps: Define audience and campaign goal → draft several message options → create matching visuals → adapt copy to social formats → check brand, facts, image rights, and accessibility → schedule only after approval.

9. Training video workflow

Tool chain: ChatGPT → Synthesia or HeyGen → ElevenLabs / Descript

Steps: Draft and fact-check the script → create presenter video or narration → edit transcript and pacing → add captions → review pronunciation and visual accuracy → publish with appropriate permissions.

10. Agriculture observation workflow

Tool chain: Plantix or Agrio → field records → local agronomist

Steps: Take a clear image and record crop, location, and symptoms → review app suggestions → document weather and field history → compare with local extension guidance → confirm diagnosis before applying treatment.

Responsible-use checklist

- Do not upload confidential, personal, patient, student, legal, or company data unless the tool and account are approved for that purpose.
- Check AI-generated facts, calculations, references, and citations against reliable original sources.
- For decisions affecting health, employment, finance, legal rights, or safety, require qualified human review.
- Check terms of service, licensing, consent, and regional availability before publishing generated content.
- Start with a small test, document the workflow, and keep a human fallback when automation fails.
